

Clean airport programme

A series of nine points to create cleaner airports:

Carbon emissions reduction

- reduction of carbon emissions from aircraft (renewable carbon neutral fuel)

Pollution reduction

- reduction of pollution from ground transportation vehicles – petrol, diesel, replacement electric, fuel cell, LPG

Contamination elimination

- elimination of contamination from de-icing (infrared de-icing)

Noise reduction

- reduction of airport noise (anti noise generation airport footprint and aircraft footprint)

Natural water use

- use of water resources (roof water collection, runway water collection/treatment)

Proactive publicity

- proactive approach to irritation by local residents (instead of reactive)

Green electricity use

- use of 'green' electricity of offset Climate Change Levy on black power

Carbon offset

- carbon offset tree planting

Renewable energy production

- electricity production on site from renewables
